

AG OPERATIONS

SKID STEERS/COMPACT TRACK LOADERS/
COMPACT WHEEL LOADERS/ATTACHMENTS

JOHN DEERE

Compact *but mighty.*

Do more, more efficiently, with a little help from Deere.

From sunup to sundown, all day and every day, you work to keep your operation efficient and profitable. John Deere understands that — and we have the lineup of compact equipment to help. From the job-proven four-wheel-drive K-Series Loaders, to our newest G-Series Skid Steers and Compact Track Loaders, to the more than 100 Worksite Pro™ attachment options that connect interchangeably across our compact product range, we have the application to tackle most any task. Having John Deere machines on the farm is kind of like having those extra hired hands you're always wishing for — without the hassle.

LET'S GET TO WORK.

Bull strong.

Our all-new G-Series models enable you to work efficiently in pens, stalls, and other tight spaces where larger machines just won't do. With their impressive power, lift heights, and visibility, these agile machines completely redefine what compact ag equipment can do. Choose vertical or radial lift, skid steer or compact track loader (CTL), small or large frame — whichever best matches your applications and operations.

Smooth-running turbocharged EPA Final Tier 4 (FT4)/EU Stage IV diesels pack plenty of power and torque.

Ample pushing power and improved breakout forces deliver superior traction and leverage.

Oil-bathed final-drive chains withstand daily punishment and never need adjustment.

Beefed-up drive sprockets deliver long-term durability.

Slimmed-down wheel options enable small-frame 312GR–318G Skid Steers to easily fit through openings as narrow as 1.52 m (60 in.).

With weights from only 2722–3721 kg (5,995–8,195 lb.), G-Series small-frame compacts are easy to trailer behind a standard pickup truck.

Featuring additional lift height and reach, greater boom and bucket breakout forces, and more horsepower than their small-frame siblings, large-frame 331G and 333G CTLs and 330G and 332G Skid Steers are born ready to handle your heaviest chores.

of skid steers and CTLs. Visit the
Commercial Worksite Products
section at [JohnDeere.com/CWP](https://www.johndeere.com/CWP)

A Deere 324E skid steer loader is shown in action, moving a pile of dark material (possibly mulch or soil) with its bucket. The machine is black with yellow accents on the boom and wheels. The operator's cab is visible through the large glass window. The background shows trees and foliage, suggesting a farm or construction site environment. The lighting is bright, creating a hazy, dusty atmosphere around the machine.

SKID STEERS AND CTLs
E-SERIES

Ag made “E”asy.

These strong, nimble farmhands are perfect for loading feed mixers, scraping and bedding stalls, moving hay bales, and more. Our E-Series medium-frame machines feature big-time comfort, control, engine power, and boom and bucket breakout forces, making them perfect for large ag operations and high-production ag applications.

Ultra-reliable FT4/Stage IV diesels deliver impressive displacement, torque rise, and usable power.

Virtually unobstructed sightlines give you a clear view in all directions.

Quiet, variable-speed fan runs only as needed, enabling consistent power and reducing noise.

Two-speed transmission option provides greater speed and fuel efficiency.

Customize machine response and operation with the optional Electrohydraulic (EH) Joystick Performance Package.

Productivity is always in season.

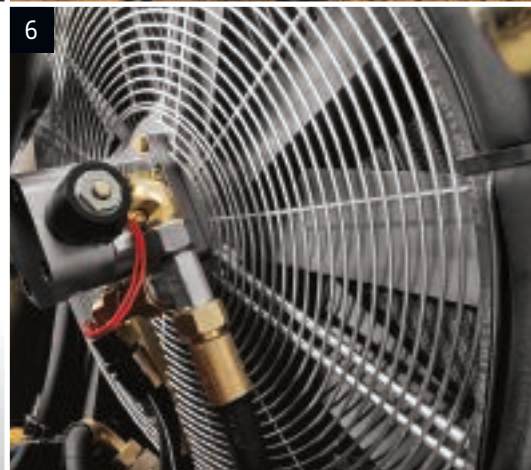

Low profile. Multi-purpose. With plenty of power to boot. Whether you're loading seed, pushing snow, or cleaning out pens, you can rely on John Deere K-Series Compact Wheel Loaders to handle the heavy lifting and help you get more work done.

204K/304K FEATURES

1. Compact dimensions enable you to navigate narrow doorways, trailers, and other low-clearance openings with ease.
2. ROPS-certified, open-canopy models provide best-in-class visibility and comfort, and make machine entry and exit a breeze.
3. Sealed-switch module provides fingertip control of the skid-steer-style coupler, optional creeper control, and other machine functions.

244K/324K FEATURES

4. Stereo-steering system counteracts load forces for superior full-turn tipping-load capacities.
5. Walk-through cab allows you to get in and out easily from either side.
6. Hydraulically driven fan runs only as needed for efficient cooling, reduced noise, and lower fuel consumption.

204K/304K

Limited-slip differential lock for superior traction in harsh conditions.

Standard two-speed transmission for travel speeds up to 20 km/h (12 mph).

Push-button-actuated coupler for easy attachment switchover.

244K/324K

Manual low-speed differential lock for advanced stability and control.

Low-effort single-handed control for boom, bucket, differential lock, and more.

Two-range hydrostatic drivetrain for speeds up to 30 km/h (19 mph).

Oscillating rear axle for a smooth ride and less material spillage.

BUILDING. TOGETHER.

CULTIVATING SUCCESS.
TOGETHER.

DEERE KNOWS AG — we always have. And we're committed to helping farmers and ranchers like you be as successful as they can. So when your day goes from unloading trucks to stacking bales to moving silage and feed, dependable John Deere ag equipment will give you the versatility, efficiency, and profitability your operation needs to succeed.
