JOHN DEERE

## Rolling Basket Scrapers for Combination Rippers

Working in wet conditions is not ideal but is necessary sometimes to get the job done. In wet and muddy fields, rolling baskets can plug – which forces the operator to stop and clean the rolling basket – leading to lost time. One workaround is to raise the rolling basket over wet spots, but that may cause soil finish problems.

The solution? A rolling basket scraper, which allows you to keep the rolling baskets in the ground 100% of the time without worry of plugging. Rolling basket scrapers are available to install as an aftermarket upgrade on 2720 and 2730 combination rippers.

*Rolling Basket Scraper*

### What's Included:

One kits will provide all the necessary parts to upgrade a machine.

The kit includes:

- The scrapers and brackets for the entire machine
